

ABRASABLOCK™ Compound Bucket Lip Protectors

Alloys International presents a new concept in Bucket Lip Protection

- Vacuum Sintered Tungsten Carbide in a high wear resistant matrix
- Sintered Carbide to provide impact resistance and allows superior bond between wear block and mild steel backing

This new concept integrates the ultimate wear resistance provided by tungsten carbide in a propriety matrix in combination with the impact resistance provided by the chrome carbide which is vacuum brazed to a lip to provide a design to overcome the high demands of lip protectors in high wear applications.
